Stubborn Case

"I was under the treatment of two doctors," writes Mrs. R. L. Phillips, of Indian Valley, Va., "and they pronounced my case a very stubborn one, of womanly weakness. I was not able to sit up, when I commenced to take Cardui.

I used it about one week, before I saw much change. Now, the severe pain, that had been in my side for years, has gone, and I don't suffer at all. I am feeling better than in a long time, and cannot speak too highly of Cardui."

TAKE The CARDUI Woman's Tonic

if you are one of those ailing women who suffer from any of the troubles so common to women.

Cardui is a builder of womanly strength. Composed of purely vegetable ingredients, it acts quickly on the womanly system, building up womanly strength, toning up the womanly nerves, and regulating the womanly system. Cardui has been in successful use for more than 50 years. Thousands of ladies have written to tell of the benefit they received from it. Try it for your troubles. Begin today.

ALASKA COALS ARE DESCRIBED

In a Report Issued by the Geological Survey of the United States.

WASHINGTON, D. C., Feb. 8.—Like a great curved dagger, 120 miles in thickness at the hilt and trending south and west for a distance of 800 miles, the Alaska Peninsula presents one of the most striking of land formations. Beyond it stretches the chain of the Aleutian Islands a thousand miles farther. The coast line of the peninsula is ragged and irregular, with innumerable indentations and bold cliffs and headlands.

"The Geology and Mineral Resources of Parts of Alaska Peninsula" is the title of a report by Wallace W. Atwood, recently issued by the United States Geological Survey. During the Russian occupation of Alaska many facts concerning the geology of the peninsula were collected, but the study by Dall and Becker, of the geological survey, of the coal and gold deposits of Unga Island and of some of the coal beds of the mainland in 1896 represents the first attempt at systematic investigation of the mineral resources. Martin, in 1903 and 1904, made the first examination of the petroleum seepages. Meanwhile other investigators had contributed to the knowledge of the general geology.

The prosecution of the survey's general plan of investigating the coal resources of Alaska led to Mr. Atwood's work, which included the three most important local coal fields, the Ohiginik, Herendeen Bay and Unga. Incidentally he collected considerable information in regard to the general geology and mineral resources of the entire peninsula.

Coal Fields Mapped.
Mapping was done in some detail in the surveyed coal fields and the results are set forth with considerable confidence as to their accuracy. Far less definite information was obtained as to the area and stratigraphic geology and mineral deposits of the rest of the peninsula. If funds are available, more detailed investigations of the geology and mineral deposits will be undertaken when the mining advancement seems to demand them. As early as 1854 attempts were made to mine coal on Cook Inlet. Coal claims were staked on Unga Island in the early seventies, and ten years later some systematic mining at this and other localities in southwestern Alaska was begun. The rapid development

of the more accessible coal fields of California, Washington and Vancouver Island, which began about 1870, supplied the west coast market, and from that time until very recently little attention has been given to Alaska coal. Mining to supply local demands, has however, continued in the peninsula to the present day.

Coal Fields Accessible.
The coal of Alaska peninsula is not of as high grade as that of the Bering river and Matanuska fields, but the fields are more accessible. The fields described in the survey report all near good harbors, a location that will give them an advantage over the high-grade coals of other Alaska fields. Moreover, their close proximity to the great circle route from Puget Sound to Yokohama will certainly eventually accrue to their benefit, though it must be confessed that their immediate use for trans-Pacific shipment does not seem practicable. On the other hand, unless petroleum is found, they furnish the only local source of fuel for Alaska Peninsula, which is without timber.

Some drilling for oil has been done on the peninsula, but it has not either shown the presence or the absence of a commercially valuable pool. It appears, however, that the geological data at hand warrant the continuation of the search.

So far as known geological conditions like those on Unga Island, where successful gold mining has been carried on for many years, may be found in other parts of the province, so that there seems to be a field here that warrants the attention of the lode prospector.

Except for the absence of timber, the conditions in Alaska Peninsula are more favorable for mining than in many other parts of the territory. The open season is longer and the winter is less severe than in the interior or in Seward Peninsula. Numerous good harbors are open to navigation throughout the year. The luxuriant growth of grass in the peninsula, except in the high mountains, favors the use of horses, and the many streams and lakes render much of the region readily accessible to small boats.

The report contains a large scale map of the peninsula. A copy may be obtained free on application to the director of the geological survey, Washington, D. C.

ORCHARD

Is to Be Set Out by the State in the Twin Mountain Region.

MORGANTOWN, Feb. 8.—A demonstration orchard of some ten or twenty acres will be set out by the state on Patterson creek mountain adjoining the Twin mountain region at the junction of Hardy, Grant, Mineral and Hampshire counties, early in the spring. The state does not purchase the property for the orchard but plants and arranges the trees and has direct supervision over the orchard work. This supervision is exercised by the experts at the state experiment station.

Plans for the orchard and other phases of the state agricultural work were discussed yesterday by Regent Finley, James Lakin, a member of the board of control, President Hodges of the university, and Director Sanderson, of the experiment station, at a conference held in the university council room. The conferees are members of the committee recently authorized by the state board of regents and consists of two regents, Mr. Oglebay being unable to attend the meeting yesterday; one member of the board of control, the president of the university and the director of the station.

REYNOLDSVILLE

Letter of Personal Mention and News of Various other Kinds.

REYNOLDSVILLE, Feb. 8.—Superintendent C. D. M. Kramer went to Fairmont Tuesday on business. Mrs. Frank Rochilla returned home Wednesday after a long illness at St. Mary's hospital. It is hoped that she may be restored to health again soon. Miss Celia King was calling on Mrs. J. L. Thompson Wednesday. Mrs. C. D. M. Kramer and Miss

Nena Kramer went to Clarksburg Tuesday to do some shopping.

Charles Edinger was in Reynoldsville Tuesday doing some shopping.

The Athenian Literary Society gave a fine program rendered at the Limestone public school Tuesday night.

Miss Inez Greynold returned home Wednesday after a week's visit at Mt. Clare.

DOCTORS GAVE HER UP

Mrs. Stuart Finally Saved By Lydia E. Pinkham's Vegetable Compound—Her Story Interesting.

Elmo, Mo.—"I think your Vegetable Compound is wonderful for it has helped me. I had four doctors and they said I had female troubles and a tumor and nothing but an operation would help me. I could not sit still long enough to eat, and could sleep hardly any I was in so much misery with pains in my side and back.

"A year ago last spring my doctor gave me up, and he was surprised to see me this spring and to see my condition. I give Lydia E. Pinkham's Vegetable Compound the praise wherever I go for I know I would not be here today or have our fine baby boy if I had not taken it."—Mrs. SARAH J. STUART, R.F.D. No. 2, Box 16, Elmo, Mo.

The success of Lydia E. Pinkham's Vegetable Compound, made from roots and herbs, is unparalleled. It may be used with perfect confidence by women who suffer from displacements, inflammation, ulceration, tumors, irregularities, periodic pains, backache, bearing-down feeling, flatulency, indigestion, dizziness, or nervous prostration. Lydia E. Pinkham's Vegetable Compound is the standard remedy for female ills.

If you want special advice write to Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence.
